

What are Specialists?

For most everyday medical conditions, your PCM is your one-stop medical shop. However, there are cases when it's time to see a specialist who's had additional education and been board certified for that specialty. For example, if your PCM decides it's time for you to see a neurologist because you've been having seizures, your PCM will refer you to a neurologist then, that neurologist may treat you or, may even refer you further to a "subspecialist" like an epileptologist (or another subspecialist) to ensure you receive the best care to treat your diagnosis.

KEY

- PCM refers patient to a specialist
- Specialist referral based on your diagnosis
- 'Subspecialist' referrals based on diagnosis
